

ASG MANAGED ENCRYPTION

PC, Mac, USB & Mobile device security as a Managed service

The fastest, easiest path to PC, Mac, USB, Mobile device security & encryption compliance...

There is no easier way for your organization to secure mobile devices – including Windows, Mac PCs, Phones and Tablets - and to comply with new encryption laws than by calling ASG an authorized Managed Service Provider for Endpoint Encryption. ASG MANAGED Encryption is remotely deployed and managed for you by our highly trained IT service professionals.

There is no costly hardware or software required nor internal IT staff necessary to support your mobile device security. Qualified IT professionals, working on your behalf, use ASG MANAGED Encryption, a powerful cloud-based tool to secure your PC's, Laptops & mobile devices as an affordable monthly service. This frees up to do what you do best - run your business! Mobile device security and encryption compliance couldn't be easier!

ASG can remotely deploy and secure vulnerable PC's, Servers, Laptops, USB storage & mobile devices in your organization, including those devices owned by your employees. Whatever the quantity and mix of Windows and Mac PCs, iPhones, iPads, Android devices, or USB Storage devices, we will easily configure, manage and secure. Modules can be easily added and managed to your inventory of protected endpoint devices, if and when you need them. While encryption serves as baseline security, additional data protection including remote data wipe, data quarantine, system shutdown, and authentication revocation are available with just a phone call to ASG.

Innovative From the Cloud Down - ASG MANAGED Encryption family of software and services enforce encryption and provide security beyond that offered through ordinary encryption-only products.

All things mobile. SimplySecure™

Engineered to be delivered entirely through the cloud, with no hardware or software requirements, ASG can have you protected company-wide in a matter of a couple hours – including even those devices located far from your main office.

Architected to be delivered through "The Cloud" and offered as software-as-a-service ("SaaS") subscription these services were first to market – even before The Cloud and SaaS were fashionable. Today, most encryption software vendors claim some level of cloud or SaaS-based functionality but in reality they fall considerably short of delivering all the inherent benefits of this innovative security approach. ASG MANAGED Encryption provides real-time visibility into your PC environment, capturing and analyzing security metrics. And, most importantly, our tools respond automatically or give an administrator the ability to dynamically adapt and respond to indications of a security threat. While other vendors play "Cloud catch-up," ASG MANAGED Encryption distinguishes its service offerings as first in the category, and now with ASG MANAGED Encryption, it's also the easiest, fastest and most affordable approach to mobile device security available.
